IMPORT FROM PREDEFINED

The screenshot displays the Postman application interface. At the top, the title bar shows 'Postman' and standard window controls. Below the title bar is a menu bar with 'File', 'Edit', 'View', and 'Help'. A toolbar contains buttons for 'New', 'Import', and 'Runner'. The main workspace area is titled 'My Workspace' and shows a list of requests: 'Keepalive', 'Login', 'OnvifProbe', 'Record', and 'OnvifSearch'. The 'Login' request is selected and expanded, showing a 'GET' method and a URL: `{{H5_HOST}}/api/v1/Login?user=admin&password=827ccb0eea8a706c4c34a16891f84e7b`. The 'Authorization' tab is active, showing 'No Auth' selected. Below this, a message states: 'This request does not use any authorization. [Learn more about authorization](#)'. The 'Body' tab is also visible, showing a JSON response in 'Pretty' format:

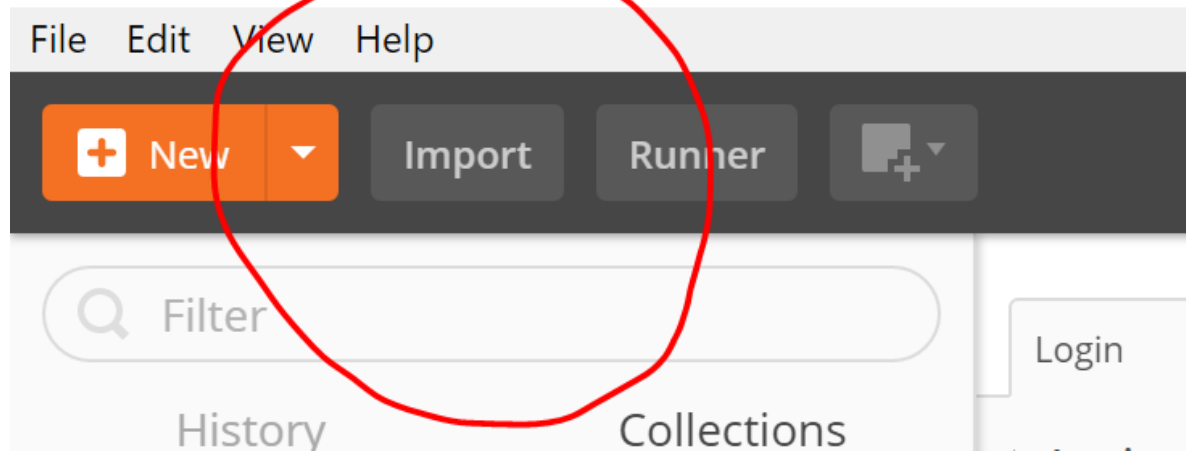

```
1 {
2   "bStatus": true,
3   "strSession": "c1782caf-b670-42d8-ba90-2244d0b0ee83",
4   "nTimeout": 600
5 }
```

 The status bar at the bottom indicates 'Status: 200 OK', 'Time: 75 ms', and 'Size: 165 B'. On the left side, a 'Collections' panel shows a folder named 'h5stream api' containing 26 requests, with 'Login' selected under the 'system' folder.
