IMPORT FROM PREDEFINED

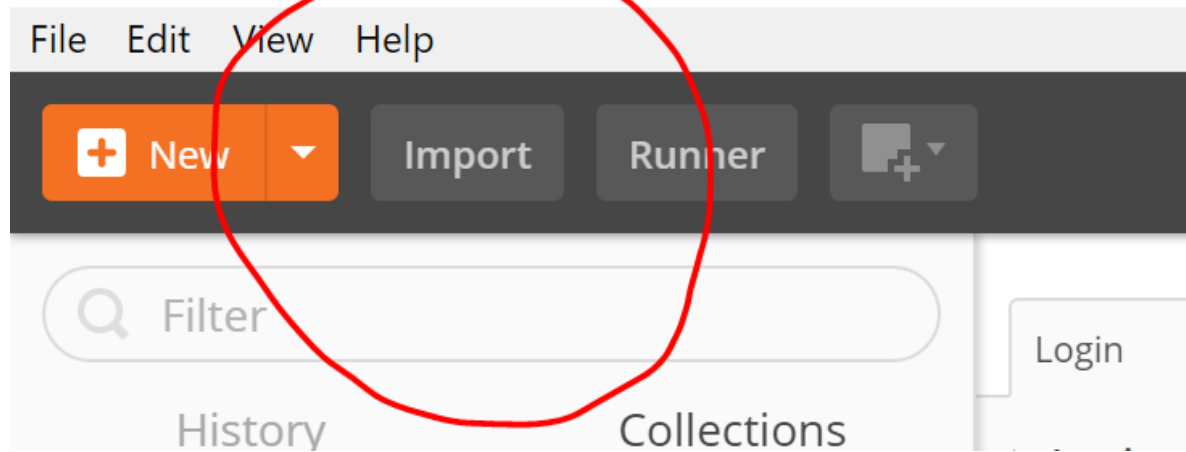

The screenshot shows the Postman application interface. At the top, there's a menu bar with 'File', 'Edit', 'View', and 'Help'. Below it is a toolbar with 'New', 'Import', and 'Runner' buttons. The main workspace is titled 'My Workspace' and contains several request tabs: 'Keepalive', 'Login', 'OnvifProbe', 'Record', and 'OnvifSearch'. The 'Login' tab is active, showing a GET request to the URL `{{H5_HOST}}/api/v1/Login?user=admin&password=827ccb0eea8a706c4c34a16891f84e7b`. The request is configured with 'No Auth' under the 'Authorization' tab. The response body is displayed in the 'Body' tab, showing a JSON object:

```
{  "bStatus": true,  "strSession": "c1782caf-b670-42d8-ba90-2244d0b0ee83",  "nTimeout": 600}
```

. The status bar at the bottom indicates 'Status: 200 OK', 'Time: 75 ms', and 'Size: 165 B'. On the left side, there's a sidebar with a 'Filter' search bar and a 'Collections' list. The 'h5stream api' collection is expanded, showing 26 requests, with 'Login' selected. Other collections like 'keepalive', 'system', 'srcmgr', and 'loading' are also visible. The bottom of the screen shows a system tray with icons for window management, search, and help, along with the text 'BUILD'.
